

# Quilter™

Performance Amplification

MICRO SIZED PACKAGE

## MONSTER SIZED POWER

# 45 MICRO BLOCK

### PEDAL SIZE POWER AMP

Quilter's in-depth knowledge of tone and overdrive is now available in a compact pedal format with 33/45 watts of speaker power. Perfect for the player who doesn't need the mighty Tone Block's 200-watt output. Go ahead, plug in, turn it up & watch the jaws drop as a big helping of high energy Quilter mojo pours out of this little box! Clean or dirty, this efficient little workhorse keeps on rocking.

### INTUITIVE CONTROLS

Gain, Tri-Q, Master. The same three wide-range controls that made the Tone Block 200 famous are now available in pedal form. Gain goes from clean to soaring overdrive. Tri-Q goes from Blackface chime to roaring lead boost. And Master takes you from full output down to zero with no change in tone or overdrive. Perfect for practice or playing out.

### AMAZING FLEXIBILITY

As a complete miniature guitar amp, the MicroBlock 45 can fill a bedroom, living room, or even a small club as a backup amp. In addition, the MicroBlock makes a great utility amp for driving headphones, and a great general purpose playback amp using either the guitar or mini-jack input. It can even be used as a natural distortion pedal by using the headphone jack as a line output. It's the easiest way to see what the "Quilter thing" is all about.

- Comes with universal voltage 72-watt power supply
- Quarter-inch high impedance input for maximum pickup response
- Quarter inch speaker output drives 16, 8 and 4 ohm loads, and is fully protected
- Mini-jack input accepts stereo inputs, summing to mono
- Mini-jack output drives headphones or line outputs
